

Speaker Diarization Audit

Total episodes	51
Clean episodes (2 speakers detected, no issues)	41
Flagged episodes (voice variation / hallucinated extra speaker IDs)	10

⚠ Flagged Episodes — More Than 2 Voice IDs Detected

WhisperX detected 3–5 distinct speaker IDs in these episodes, but manual review confirms only **2 real speakers** are present in each. The extra IDs come from the same speaker's voice shifting slightly in tone or pitch, which WhisperX mistakes for a new person — not a diarization or transcription error.

Episode	Speaker IDs	Note
Bilinguals, Evidentiality, and Machine Translation Preference	3	Only two speakers (variation of the male speaker)
ChatGPT's Impact on Education_ A Rapid Review	3	Only two speakers (variation of the male speaker)
ChatGPT_ A Preliminary Review	3	Only two speakers (variation of the female speaker)
ChatGPT_ Education's Remedy or Challenge_	3	Only two speakers (variation of the male speaker) hallucination
Occupational Asthma_ Clinical Practice, Diagnosis, and Prognosis	5	male voice into, female and male - 3 voices (two variations of the male voice)
Optimizing Gesture Recognition for Seamless UI Interaction Using CNNs	4	male voice into, female and male - 3 voices (one variation of the male voice)
Rhoticity_ English Class and Sociolinguistic Evolution	3	two voices (variation of the female voice)
Social Space_ Collaboration Modulates Near_Far Linguistic Coding	3	male voice outro, 3 voices
WeatherBench 2_ Benchmarking Data-Driven Global Weather Forecasting	4	Male voice (appears at the 4th min), 4 voices, male voice (outro)
Zero Resource Speech Challenge 2020_ Unsupervised Learning	3	I think 2 voices (more like a variation of the female voice)
